PERFORMANCE OF FITCH® FUEL CATALYST F-200 HDG INSTALLED ON A THERMIC FLUID HEATER
FOR POLLUTION CONTROL AND ENERGY EFFICIENCY

We, Cosmo Films Limited, situated in Aurangabad, Maharashtra, are one of the largest manufacturers of speciality films used for packaging, lamination and labeling applications, having several plants across India.

FITCH® Fuel Catalyst, being manufactured by Advanced Power Systems Inc, U.S.A, was introduced to us for the purpose of improving energy efficiency and reducing pollution causing toxic emissions on any equipment using any form of hydrocarbon to produce energy. The fuel used in our premises is F.O with an average fuel consumption of over 4500 liters per day for a Thermic Fluid Heater. A pilot project was undertaken by us and KPK Impex, Pune, to look into the performance of catalyst after installing it in the fuel line of the Thermic Fluid Heater.

We had monitored the performance closely for 2 months and have recorded energy savings varying between 5% and 7%. We are satisfied with the performance and highly recommend the use of FITCH® Fuel Catalyst in other plants as well.

RAVI CHOPADE
