Letter of recommendation

to whom so ever it may concern

This is to certify, Fitch Fuel Catalyst, has been installed on Sacmi Formi / F M S 250/81,9 width 2500mm , length 81,9 m .working temperature 1200 C and F M S 2230 / 84 , width 2230mm length 84 m , working temperature 1200 C in the production facilities of Keramika Kanjiža.

We tested the system, the performance of Fitch Fuel Catalyst has been very good and about 5,3% saving achieved.

Conclusion: There is a noticeable difference in the content of oxygen which led to an increase in CO and flue gas temperatures. As a consequence no adjustments were made to the ratio of fuel and air, oxygen reduction was observed by 10%. Also, the flue gas temperature jump is about 14%.

We appreciate the green energy efforts of Fitch Fuel Catalyst, toward reducing the fuel consumption, black smoke and carbon emission.

In Kanjiža 18.04.2018.

Executive Director for Purchasing and SCM

Nemanja Bilanović
